

# Science 8 - In class review (Plant System)

1. Why do plants have fewer organ systems than animals?

They do not move to find food.  
They can make their own food

2. Most plants have 2 organ systems. They are Roots and Shoots

3. Nutrients and water are transported by the (Phloem) (Xylem) vascular system.

4. The 2 types of tissue in the vascular system are xylem and phloem

5. Xylem transports H<sub>2</sub>O

6. Phloem transports carbohydrates

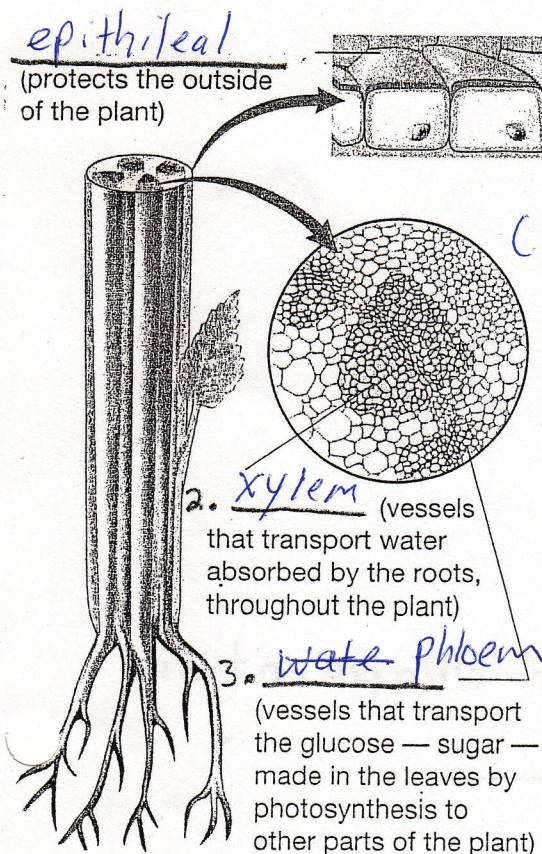

Figure 3.3 Main types of tissues found in plants
